

ExpressJS : JWT Token Authentication

User Name

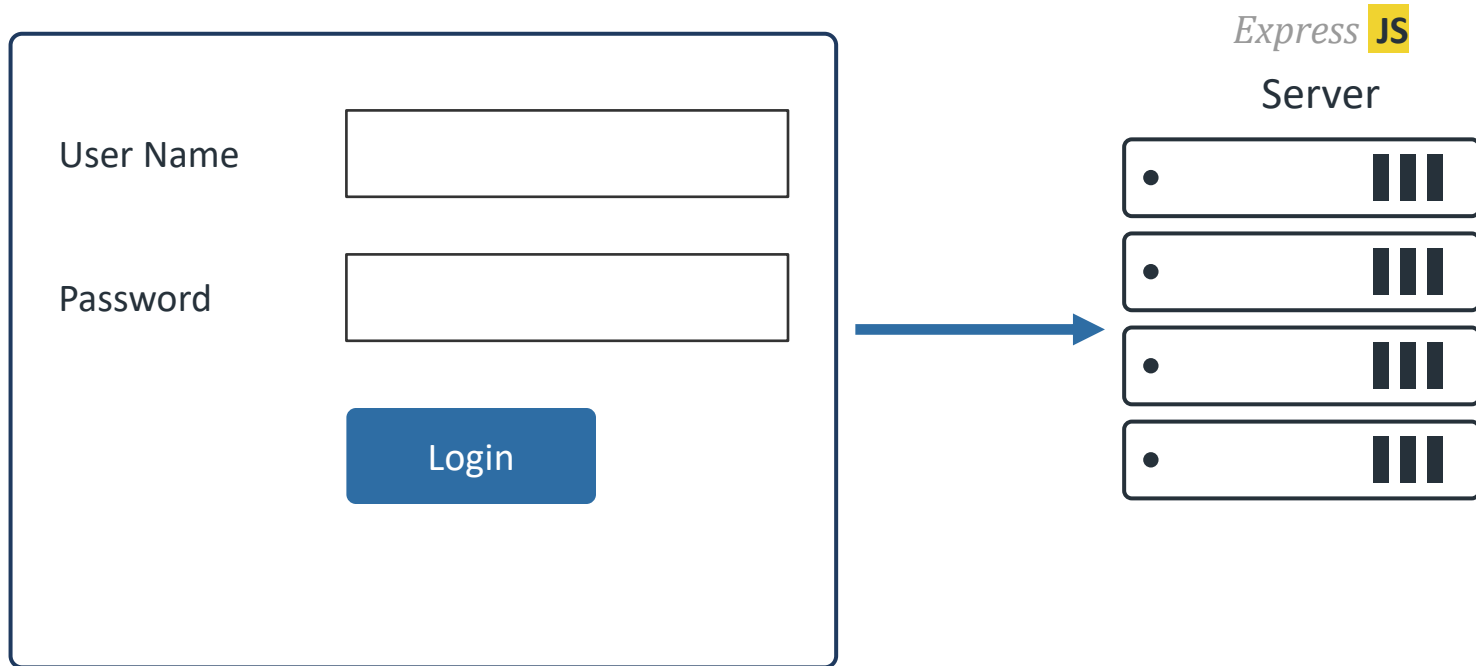

Password

Login

JWT-based authentication also begins with a familiar login form.

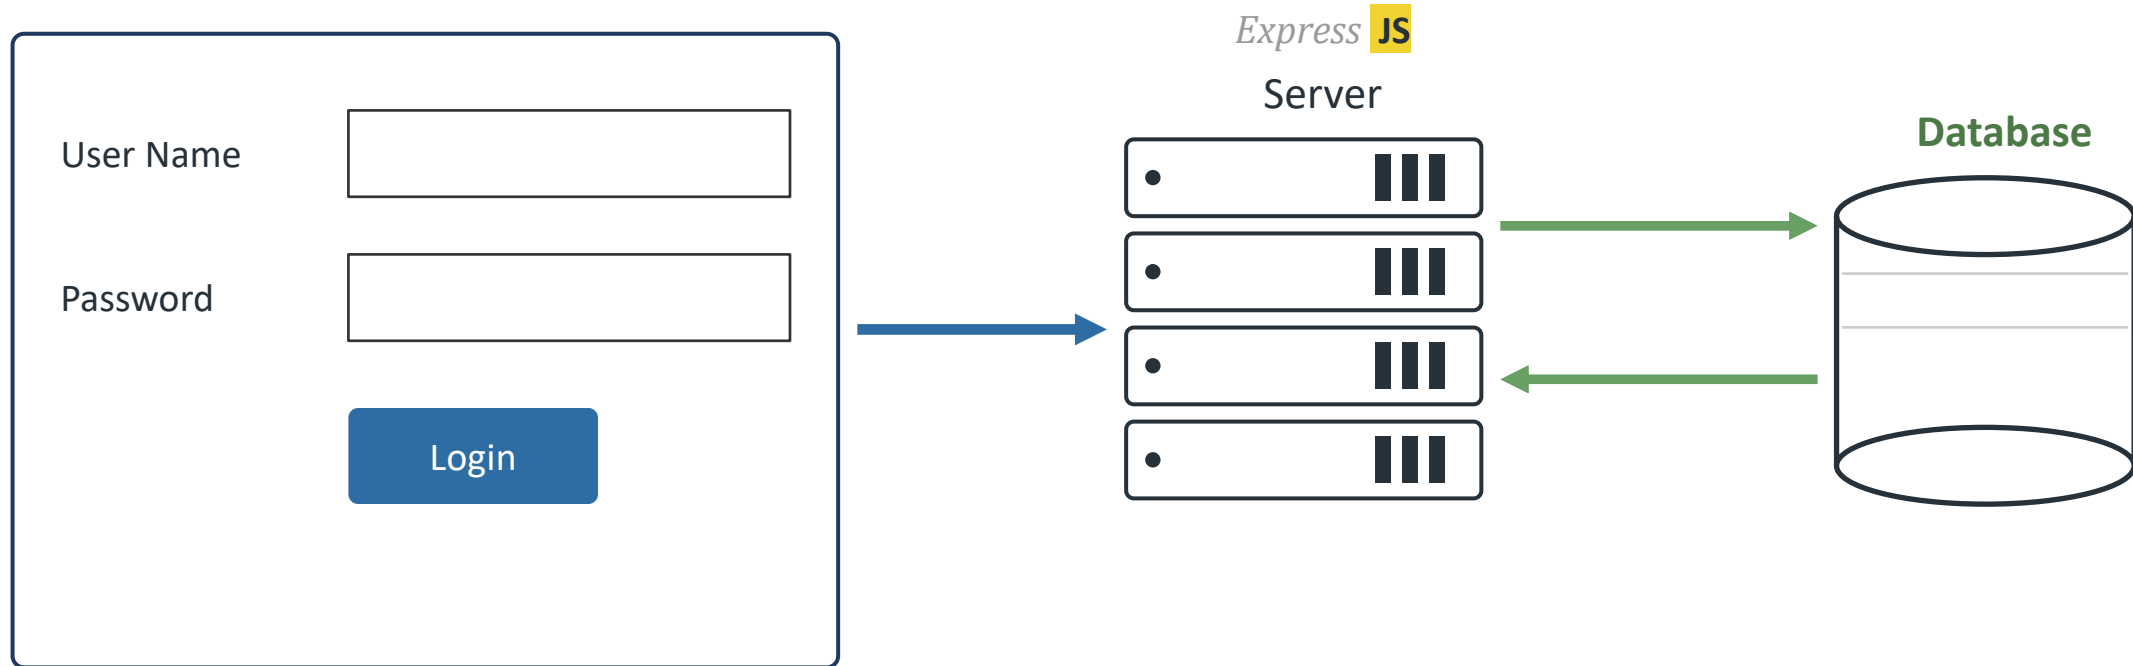

ExpressJS : JWT Token Authentication

Credentials are submitted from the client to the ExpressJS server.

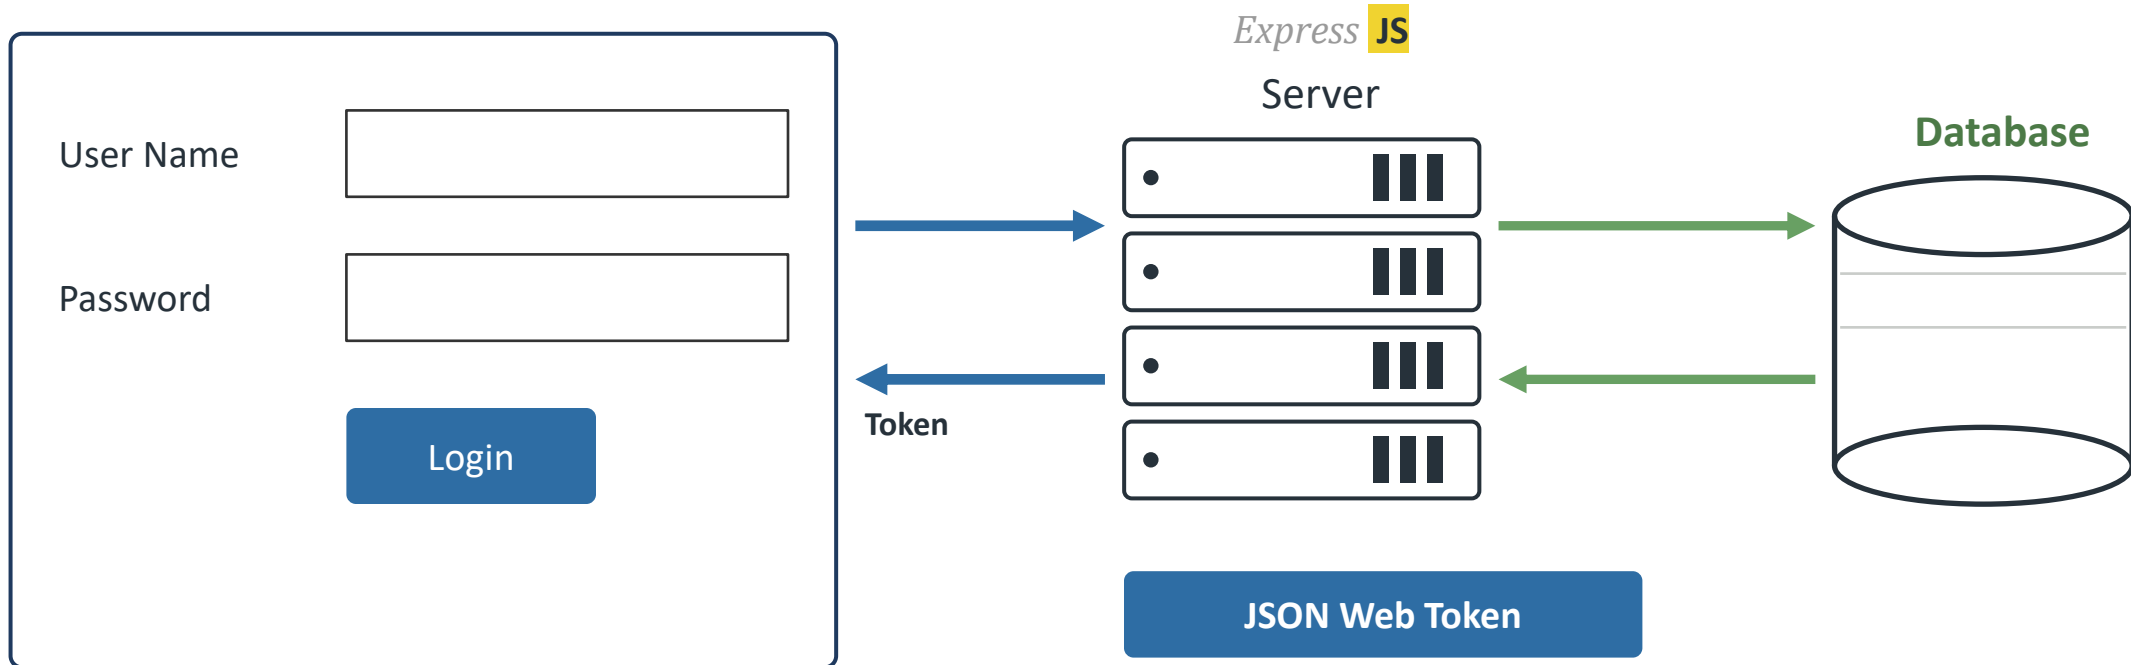

ExpressJS : JWT Token Authentication

The server verifies the username and password against the database.

ExpressJS : JWT Token Authentication

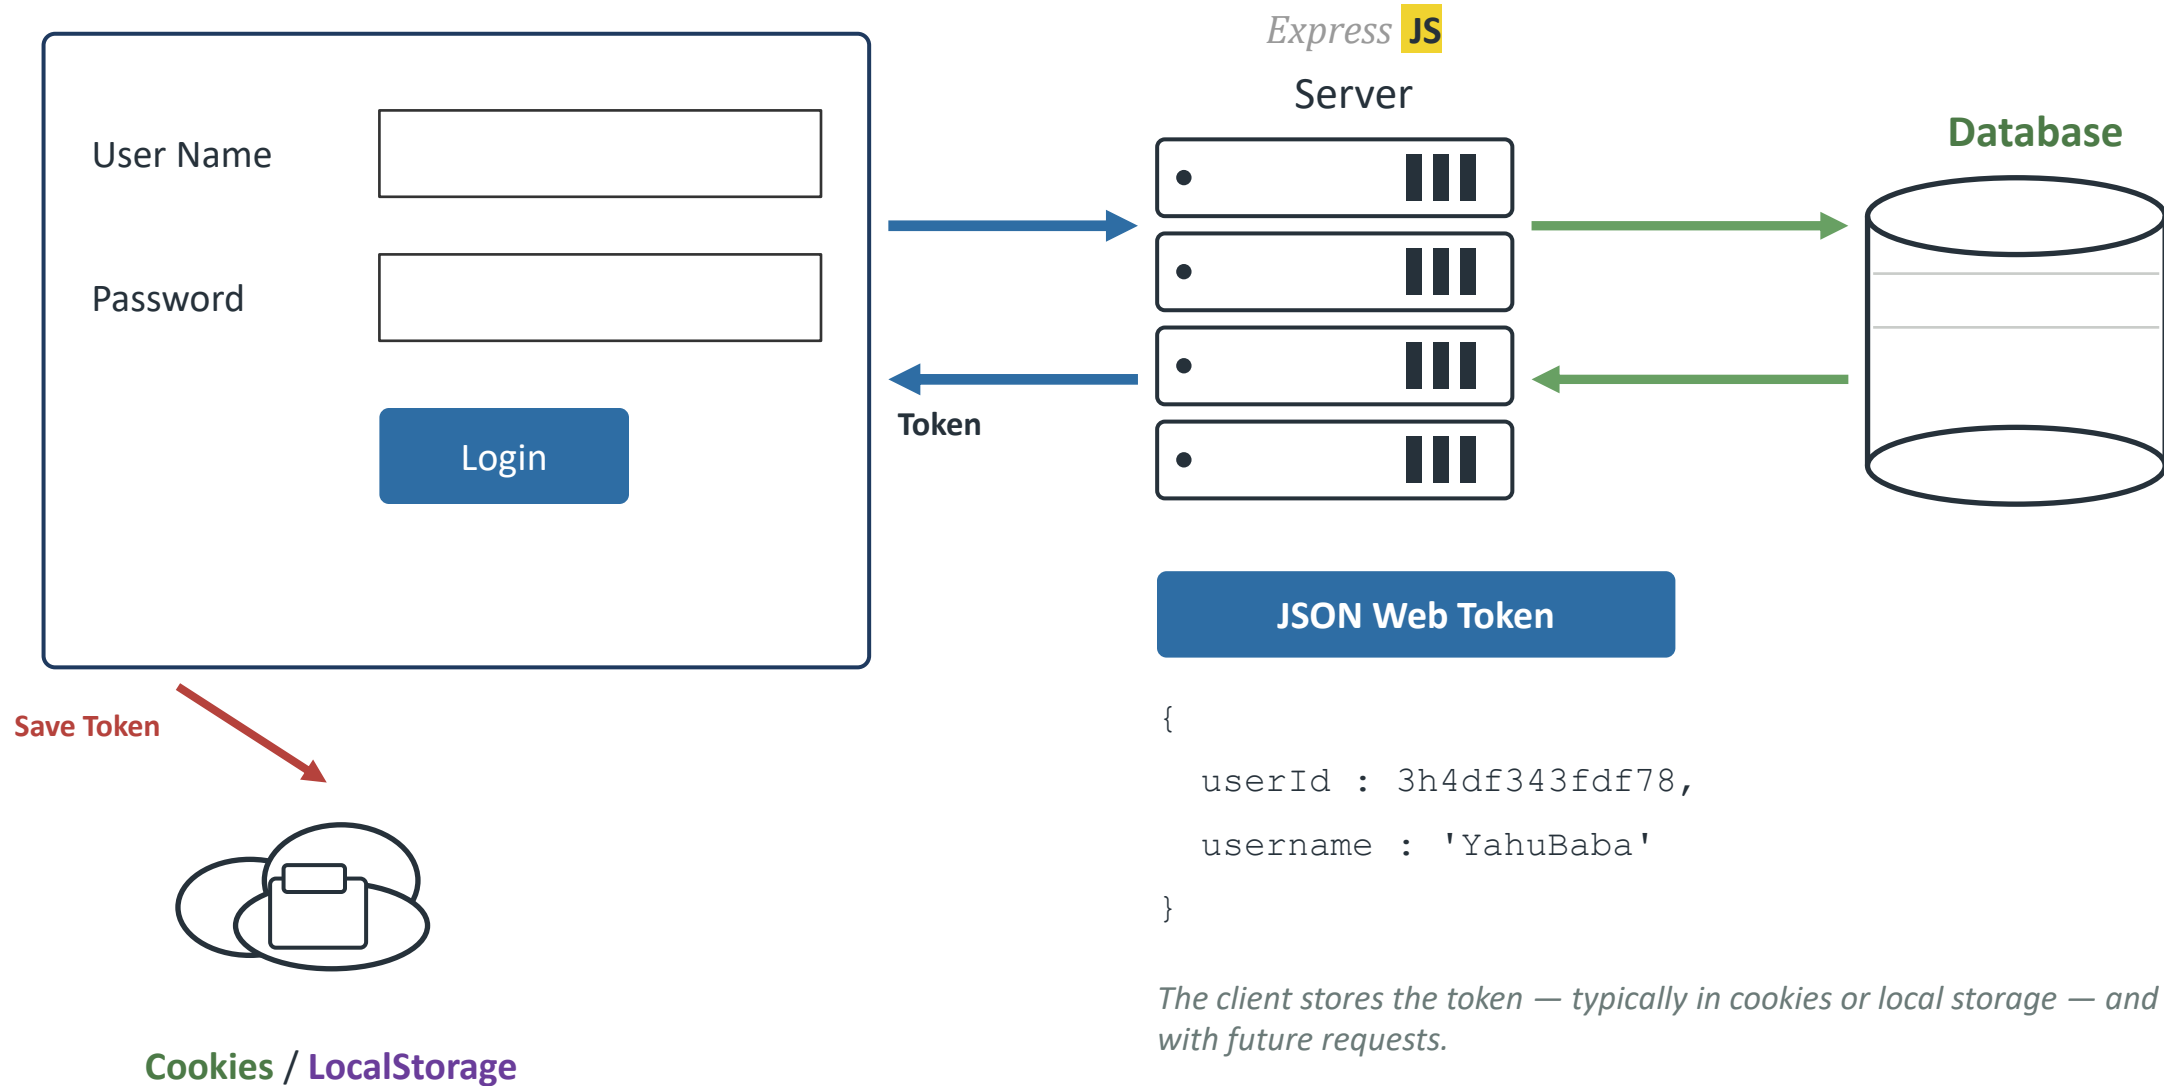

Once verified, the server signs a JWT containing the user's data and sends it back.

```
{
  userId : 3h4df343fdf78,
  username : 'Ali Khan'
}
```

ExpressJS : JWT Token Authentication

How to work with JWT Token Authentication

1

```
npm install jsonwebtoken
```

2

```
const jwt = require('jsonwebtoken');
```

3

```
const SECRET_KEY = 'AliKhan@123&';
```

4

...Login code comes here

```
If(Login Matched){  
  Const token = jwt.sign({ key: value }, SECRET_KEY, { expiresIn: '1h' });  
  return res.json({ token });  
}
```

ExpressJS : JWT Token Authentication

1

Generate Token

```
Const token = jwt.sign({ key: value }, SECRET_KEY, { expiresIn: '1h' })
```

- Cookies
- LocalStorage

2

Verify Token

```
jwt.verify(token, SECRET_KEY)
```
